CUSTOM SAAS DEVELOPMENT

End-to-end custom software built for your workflows, sector, and scale. From MVP to production.

PREBUILT PRODUCT LICENSING

Deploy proven, white-label SaaS products immediately. 13+ ready products across sectors.

TECH CONSULTANCY

Architecture reviews, AI integration strategy, product roadmaps, and digital transformation guidance.

Executive Summary

Key highlights and value proposition

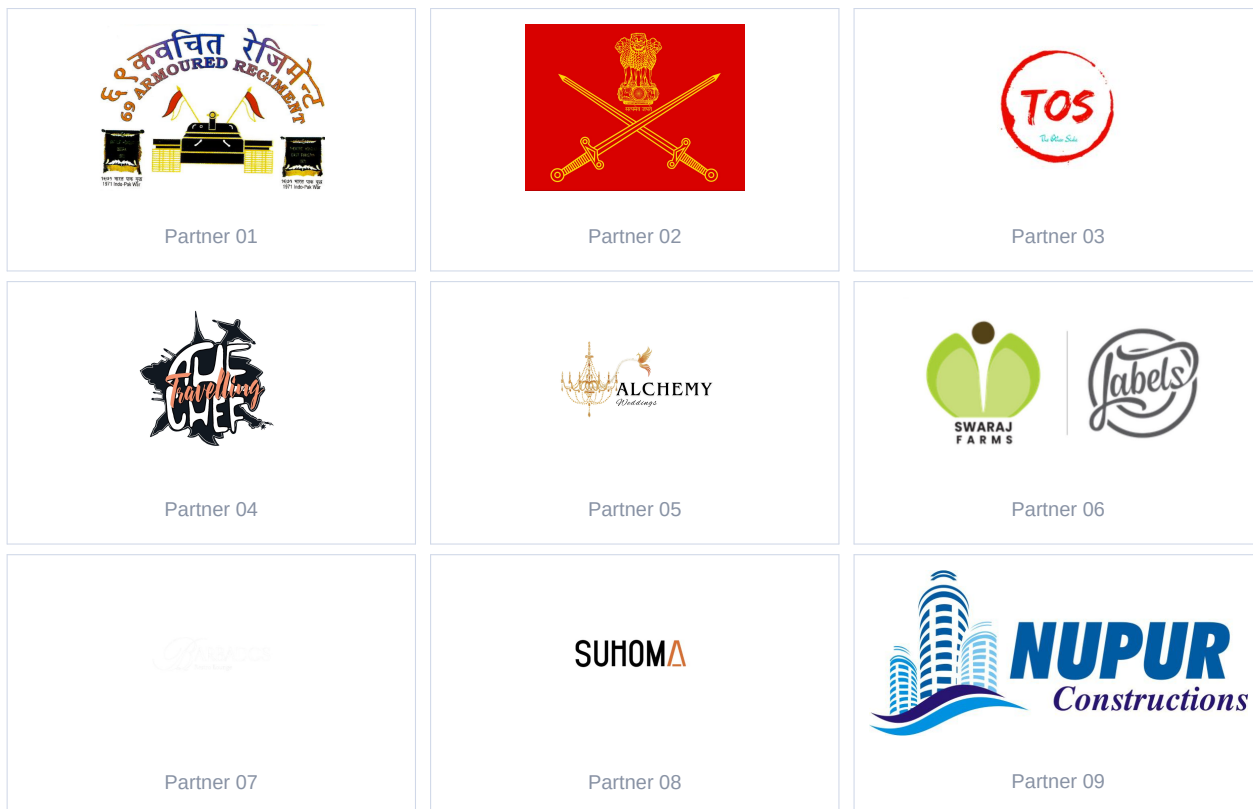

BuildDreams Technologies combines pragmatic engineering discipline with product-minded design to deliver production-grade SaaS platforms, rapid white-label licensing, and strategic technical consultancy. We prioritise durability, observability, and integration readiness so clients receive solutions that scale and endure. Below are the core claims we consistently deliver:

- Production-first delivery: staging + load testing + post-launch support.
- Flexible engagement: license, customized build, or retained support.
- Multi-sector experience: healthcare, finance, government, manufacturing, education.
- Modern stack with pragmatic integration: API-first, secure, and maintainable.

Association Partners

Trusted organizations we collaborate with

BuildDreams collaborates with multiple partner organizations across sectors. The following logos are shown exactly from the original assets shared by our partners.

Leadership & Team

Experienced delivery and product leadership

Suhomatech (Founder & CTO)

15+ years building large-scale enterprise systems, leads architecture and AI initiatives.

Operations Lead

Delivery manager focusing on SLAs, client onboarding and support.

Product & Design Lead

Product-first thinking for UX, product-market fit and roadmap prioritisation.

We supplement our core team with trusted contractors and partner firms for specialised areas such as vision AI, voice AI, and advanced analytics.

Selected Case Studies

Problem → Approach → Outcome

FlowGuard — Compliance & Lockdown for KYC Desks

Problem: Lack of visibility, non-compliant browsing and manual verification overhead across distributed desks.

Approach: Deployed offline-first browser locking, agent monitoring dashboards and automated audit exports. 2-week pilot followed by staged rollout.

Outcome: 80% reduction in manual verification effort and sustained compliance even on intermittent networks.

InfraTrack — Asset & Field Operations platform

Problem: Fragmented asset records, missing maintenance history, and delayed approvals across sites.

Approach: Built a configurable operations platform with approvals, ticketing, and mobile field forms integrated with central reporting.

Outcome: Improved SLA compliance and centralized reporting reduced resolution times by 45%.

System & Architecture

Practical architecture choices for reliability

We design systems with clear separation of concerns: frontends are stateless and CDN-delivered, APIs are auth-first with role-based access, and data stores are chosen per workload (Postgres for relational, Redis for caching, object stores for blobs). We bake observability and security into every design.

- API-first design with OpenAPI contracts and versioning.
- Event-driven integrations for decoupling and reliability.
- RAG pipelines and guarded model access for AI features.
- Staging, canary releases, and automated rollback procedures.

About Us

Who We Are & What We Stand For

BuildDreams Technologies is a Nagpur-based software company registered as an MSME enterprise (UDYAM-MH-20-0340233). We design, build, and deploy production-grade SaaS tools, workflow automation systems, and enterprise software platforms for businesses across India and beyond. We operate at the intersection of three capabilities: **building custom software** from scratch for complex enterprise needs, **licensing prebuilt products** that can be deployed and branded immediately, and **advising businesses** on technology strategy, AI integration, and digital transformation. Our team has delivered platforms across healthcare, NBFC, government, real estate, manufacturing, logistics, and education — each built with production discipline, not prototype shortcuts.

MISSION

Build software that solves real operational problems — not impressive demos — and deploy it in production environments that withstand real-world load.

VISION

Become the most trusted B2B software partner for mid-market Indian enterprises, known for delivery discipline and product longevity.

VALUES

Practicality over polish. Reliability over features. Transparency over sales pitch. Long-term partnerships over one-time projects.

Why Companies Choose BuildDreams

→ Production-first mindset	We build for real deployment — offline-first where needed, multi-tenant, load-tested. Not demos.
→ Sector-specific depth	Healthcare, NBFC, government kiosks, manufacturing, real estate — we understand operational context before writing code.
→ Prebuilt + Custom hybrid	Need speed? License a prebuilt product. Need fit? Customize it. Need something new? We build from scratch.

→ **Honest delivery estimates**

We don't oversell timelines. If a project takes 3 months, we tell you 3 months — and deliver in 3 months.

→ **Long-term support**

Post-deployment AMC, feature iterations, and dedicated support — not hand-offs to a helpdesk queue.

Our Services

Three Core Capabilities. One Reliable Partner.

01 Custom SaaS & Software Development

We design and build production-grade SaaS platforms, enterprise workflow systems, and web applications from the ground up. Every project begins with a requirements audit — we map your actual operational workflows before a single line of code is written. Deliverables include architecture documentation, staging environments, and a post-launch support plan.

- Multi-tenant SaaS platforms with role-based access control
- Workflow automation (approval chains, ticket routing, escalation logic)
- AI-powered features: RAG pipelines, vision AI, voice AI, chatbots
- WhatsApp Business API integrations and communication automation
- Custom ERP modules, reporting dashboards, and admin portals
- Offline-first architectures for low-connectivity environments

02 Prebuilt Product Licensing

We maintain a portfolio of 13+ production-ready SaaS products across verticals. These can be licensed as-is, white-labeled under your brand, or customized to your specific workflows. Deployment timelines of 2–4 weeks vs. 3–6 months for custom builds — ideal when speed to market is critical.

- White-label licensing with your branding and domain
- Configuration-based customization (no re-engineering required)
- API access for integration with your existing systems
- Dedicated onboarding and training support
- SLA-backed hosting or on-premise deployment options

03 Technology Consultancy

For businesses that need a technology partner rather than just a vendor, we offer strategic consultancy engagements. We assess your current stack, identify technical debt, recommend architectures, and build product roadmaps. We also guide AI adoption — separating genuine use cases from hype.

- Technology stack audit and modernisation roadmaps
- AI readiness assessments and integration strategy
- Product architecture design and documentation
- Vendor evaluation and procurement advisory
- CTO-as-a-Service for early-stage startups and growing SMEs

Engagement Models

Fixed-Price Projects	Retainer / AMC	License + Support	Consulting Sprint
Defined scope, timeline, and milestone payments.	Monthly retainer for ongoing development and maintenance.	One-time product license fee + annual support contract.	Short-term (2–8 week) focused advisory engagements.

Solutions & Licensing

Enterprise-grade platforms, licensing, and bespoke builds

We offer production-ready platforms that can be licensed and configured for rapid deployment, as well as fully bespoke builds when organisations need tailored workflows and integrations. Our approach balances time-to-market with maintainability and integration flexibility so customers receive a supported, long-term solution, not a brittle prototype.

License (Fast Deploy)

Configuration, white-labeling, and integration for rapid time-to-value — ideal when speed and proven reliability matter.

Custom Build (Fit & Scale)

Discovery-led bespoke development with architecture, iterative sprints, and staging environments to match complex operational needs.

Support & Hosting

SLA-backed support, annual maintenance contracts, and flexible hosting (cloud, VPS, or on-premise) to ensure long-term stability.

Sectors & Technology

Proven Across Industries. Built on Modern Stack.

Sectors We Serve

Banking & NBFC Compliance dashboards, agent monitoring, KYC workflow, audit log systems.	Healthcare Front-desk locking, patient flow management, diagnostic chain operations.
Government & PSU CSC kiosk management, citizen service portals, multi-location monitoring.	Manufacturing & MRO Visual parts recognition, inventory automation, maintenance ticketing.
Real Estate Property marketplaces, buyer verification portals, project progress tracking.	Education & EdTech Career platforms, student management, mentor-company matching ecosystems.
Logistics & Fleet Fleet tracking, route management, driver compliance and reporting.	Hospitality & Retail QR-based loyalty, reward disbursement, multi-outlet management.

Technology Stack

Frontend: React, Next.js, Tailwind CSS, HTML5/CSS3, GSAP, Lenis	Backend: Node.js, Python (FastAPI/Django), REST APIs, WebSockets
AI / ML: OpenAI GPT, Claude API, RAG pipelines, Vision AI, Whisper	Databases: PostgreSQL, MongoDB, MySQL, Redis, SQLite (offline-first)
Infrastructure: Vercel, AWS, Docker, Nginx, Linux VPS, On-Premise	Integrations: WhatsApp Business API, Razorpay, Stripe, Twilio, Slack, Email SMTP

Our Delivery Process

01 Discovery Requirements workshop, operational workflow mapping, constraint identification.	02 Architecture System design, database schema, API contracts, tech stack finalisation.	03 Build Iterative sprints with staging deployments. Client reviews at each milestone.
04 QA & Testing Load testing, edge case coverage, security review, UAT with client team.	05 Deploy Production deployment, documentation handover, team training.	06 Support Post-launch monitoring, bug fixes, AMC, and iteration planning.

Client Testimonials

Real Results from Real Deployments

" We had 22 KYC desks across 4 branches and zero visibility into what agents were doing. FlowGuard gave us a live compliance dashboard in 2 weeks. Our team saved 6 hours a week on manual log verification. "

Priya Sharma · Private NBFC · Mumbai

" Front-desk PCs were being used for personal browsing during patient check-in. After FlowGuard, every interaction is logged and browser-locked. Works perfectly even when our hospital's internet drops. "

Dr. Anand Mehta · Diagnostic Chain · Pune

" We deployed FlowGuard across 40 government CSC kiosks in three districts. The offline-first architecture was the deciding factor — our locations have unreliable connectivity. No missed filings since go-live. "

Ramesh Patil · Government Services Integrator · Nashik

" Our team stopped missing follow-ups. The workflow system gives us a clear daily run-of-show. We went from chaos to clarity in about three weeks of deployment. "

Rohan Iyer · Operations Lead · Bangalore
