

SIERRA DIGITAL FORENSICS PVT LTD

Turnkey Technology Partner

ABOUT US

-  Ex-Defence Officers Venture
-  System Integrators
-  20+ Years of Expertise
-  Focused on Customer's Need
-  Customized Turnkey Solutions
-  Long and Strong Support

RECOGNITION

SIERRA DIGITAL FORENSICS PVT LTD

SYSTEMS WE DEAL IN

- SURVEILLANCE SYSTEM
- AI & ANALYTICS
- ACCESS CONTROL SYSTEM
- COMMAND & CONTROL SYSTEM
- VISITOR MANAGEMENT SYSTEM
- QR CODE BASED SYSTEM
- FIRE CONTROL SYSTEM
- AUDIO-VIDEO SYSTEM
- VEHICLE TRACKING SYSTEM
- INTRUSION DETECTION SYSTEM
- PARKING MANAGEMENT SYSTEM
- GUARD TOUR SYSTEM
- NETWORKING EQUIPMENT
- SECURITY SOFTWARE
- SECURITY/SAFETY EQUIPMENT
- AUDITS & ASSESSMENT

SURVEILLANCE SYSTEM

We provide all types of CCTV cameras for all types of application. The entire process of Supply, Installation, Testing and Commissioning is done by our team to provide you seamless integration and complete solution. Complete help is provided by us to finalize the make and model of the CCTV Cameras so that you don't buy the wrong product and use what is suitable for your application. Unwanted hardware wastes your money and resources.

Network Video Recorders and Storages are also available with us. As per the duration of the recording required, we can recommend and provide NVRs and Storage devices.

PoE Switches and other type of network switches are also available which enables us to provide our customers, complete set of solution.

All Cable and connectors with very high quality and long life which helps in better communication for the IP network.

PoE extenders which are used to extend the range of UTP cable from 100 meter to 450 meters are available for decluttering network.

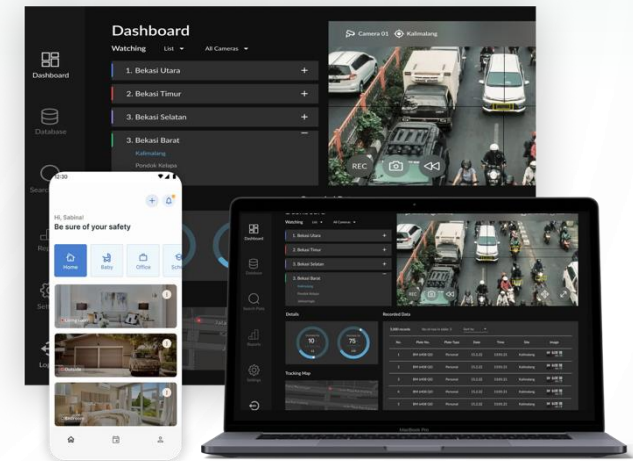

AI & ANALYTICS

Advance AI and Analytics help in detection of anomalies, before it can cause major loss to the organization. They are very accurate and fast, which helps in early detection of accidents, and we can act quickly.

Some Features of AI available with us are:

1. Advance Recognition for authorization and authentication
2. Real time detection of anomalies on live feed
3. No need to change the existing CCTV Cameras
4. 150+ Use cases to help you detect any accidents
5. Active dashboard which can highlight anomalies
6. Log creation which helps in investigation
7. Integration of Access Control, Fire, BMS and many other systems
8. Seamless functioning with health monitoring of systems

ACCESS CONTROL SYSTEM: PERSONNEL

Access Control Systems involve detection, authentication, barricading and channelizing. The machines we provide for this purpose are designed, fabricated, manufactured and assembled in India to provide flexibility of design, desired output and robust operations, even in harsh conditions.

Although, there are many Biometric Access Devices, but latest trend is use of Face Recognition devices. They are accurate and fast in comparison to others and use AI to make the operations even more seamless. We have specialized models which are designed and developed to be used with Turnstiles and provide robust build quality for outdoor usage.

Full Height Turnstiles are the most effective way of streamlining the security operation when the count is big and multiple lanes need to be made in a small space. We can not only have the count but can protect the property during Distress situations.

ACCESS CONTROL SYSTEMS: VEHICLE

S. No	System
1	RFID System (UHF Reader)
2	Visitor Management System
3	Automatic Number Plate Reading System
4	Parking Management System
5	Automatic Boom Barrier
6	Under Vehicle Surveillance System
7	Gate Management System
8	Bollards

COMMAND & CONTROL CENTER

Integration of all Systems working in a location or across the geographies to monitor and control them centrally. Modern ICCCs are very fast and capable of acting as God's Eye for the organization.

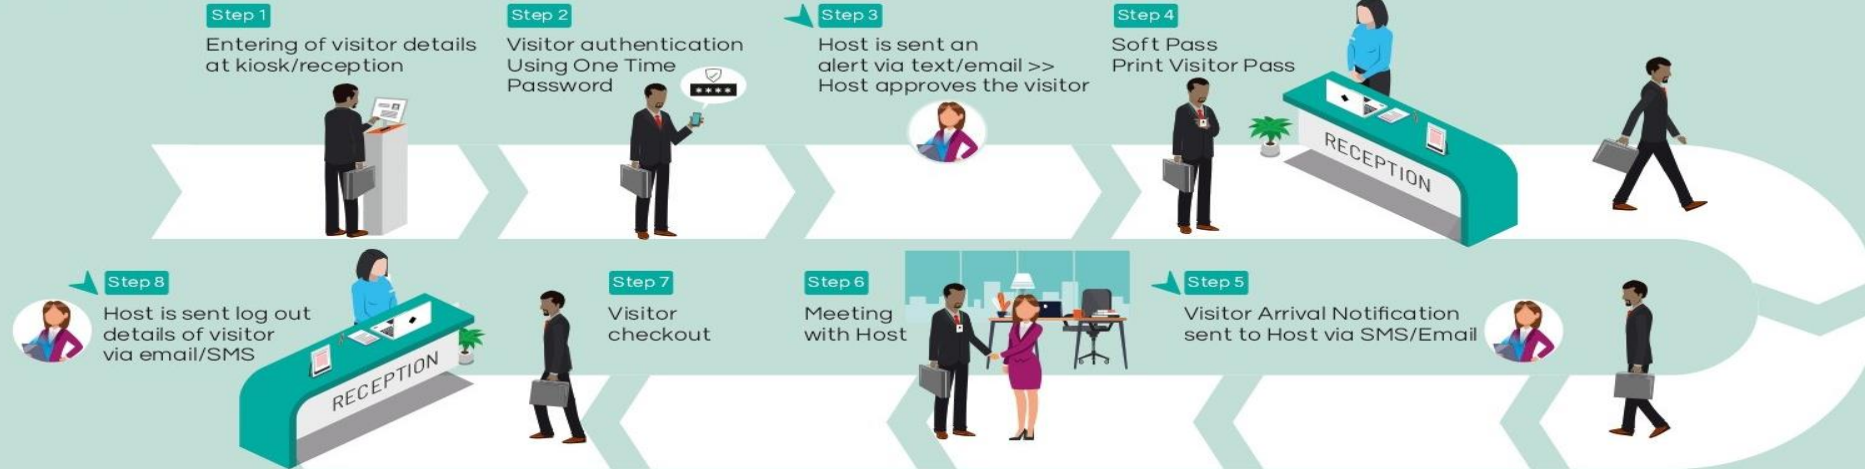

- Multiple systems can be configured for monitoring and controlling
- Multiple systems can be integrated for joint working and decision making
- Multiple geographies can be mapped and acted upon simultaneously
- Seamless communication to all the locations and central monitoring
- Save lot of manpower, energy and efforts in Security and Safety

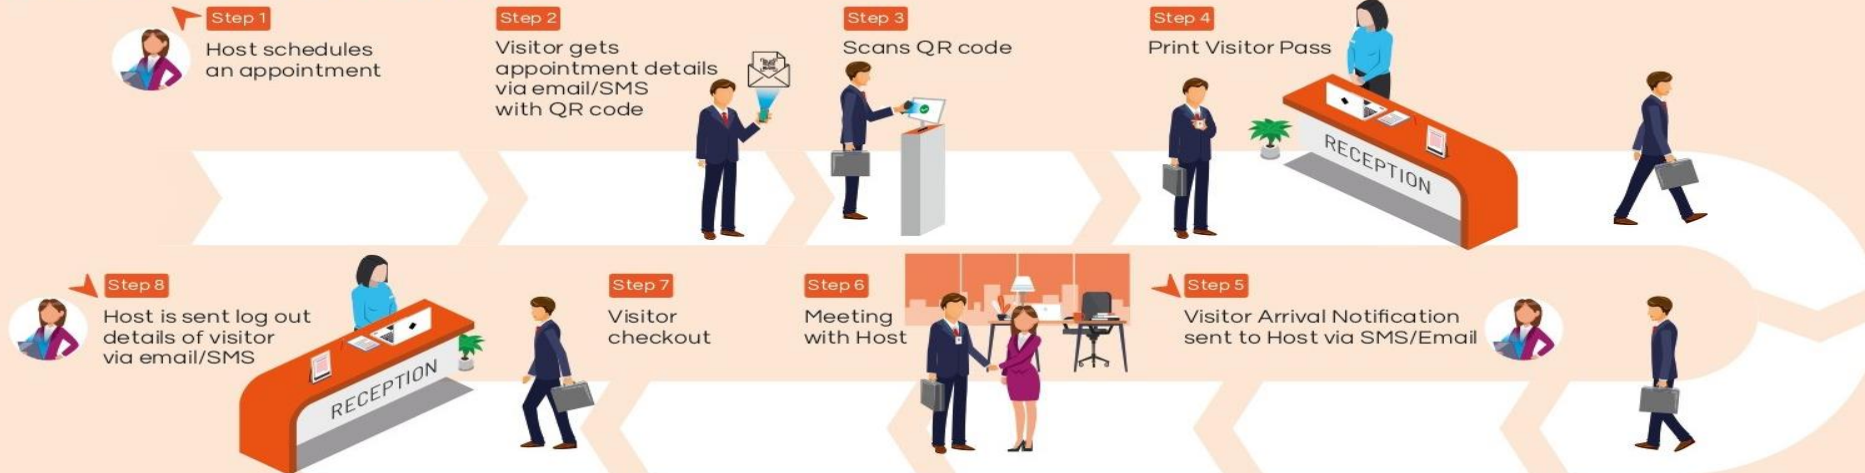

VISITOR MANAGEMENT SYSTEM

WALK-IN VISITORS

PRE-APPOINTMENT VISITORS

QR CODE BASED SOLUTIONS

Visitor walks in
at the premise

Visitor registers
at VMS

Visitor scans the
Entry QR Code

Visitor Mobile
Camera is Disabled

Visitor scans the
Exit QR Code

Visitor goes back to
Reception

Visitor attends the
Meeting

FIRE CONTROL SYSTEMS

Detection

- Various types of detectors are available for fire and smoke
- Type depends on usage, application and place of installation
- Wireless detectors are also available for damage-free installation

Notification

- Alarm panels indicate the zone of fire
- Multiple alarms can be set as per need
- Integration with the BMS is also done by our team

Suppression

- Extinguishers can be placed as per need
- Hydrant System are mandatory for all industries
- We have our own manufacturing of Hydrant Systems

AUDIO-VIDEO SYSTEMS

Our IP PA systems are very robust and provide utmost clarity in voice and speech. They are scalable and are just plug and play solutions, which work with your existing network.

The Video Intercom Systems are available for both home and corporate setups. Both IP and analog are available with us.

Video Conferencing systems are available in various brands, forms and types so that we can implement them at various types of locations. For conference halls, meeting rooms, recreational halls and small offices, we have a solution for every type of setup.

We can setup your recreational hall with high end Active LED Screens and Digital Dolby Audio System for a world-class experience. We have different types of display systems to give you unmatched visual experience within your budget.

VEHICLE TRACKING SYSTEMS

- ✓Real Time Tracking
- ✓History Replay
- ✓Panic/ SOS / Emergency Button
- ✓Data Backup
- ✓Immobilizer / Engine cut
- ✓Ignition / Engine (Status)
- ✓Speed alerts
- ✓Geo – Fence Alerts
- ✓Way- Point Alerts
- ✓Device Disconnect/ Tamper Alert
- ✓Email / SMS Alerts
- ✓Reports
- ✓Data Export / Print
- ✓24 x 7 , 365 days customer care

INTRUSION DETECTION SYSTEMS

Real-Time Detection and Alerts: PIDS system can instantly detect intrusion attempts, such as climbing, cutting, or digging, and trigger immediate alerts to security personnel.

Customizable Sensitivity: These systems can be tailored to specific site conditions, minimizing false alarms and optimizing detection accuracy.

Integration Capabilities: Perimeter Intruder Detection Systems (PIDS) can seamlessly integrate with other perimeter fence security systems, such as CCTV, access control, and alarm systems, creating a unified and comprehensive security solution.

Weather Resistance: The PIDS system is designed to withstand harsh weather conditions, ensuring reliable performance in any climate.

Wireless Options: Wireless PIDS systems offer flexibility and ease of installation, especially in remote or challenging terrain.

Long range laser scanners

Short range laser scanners

Fibre optic fence sensors

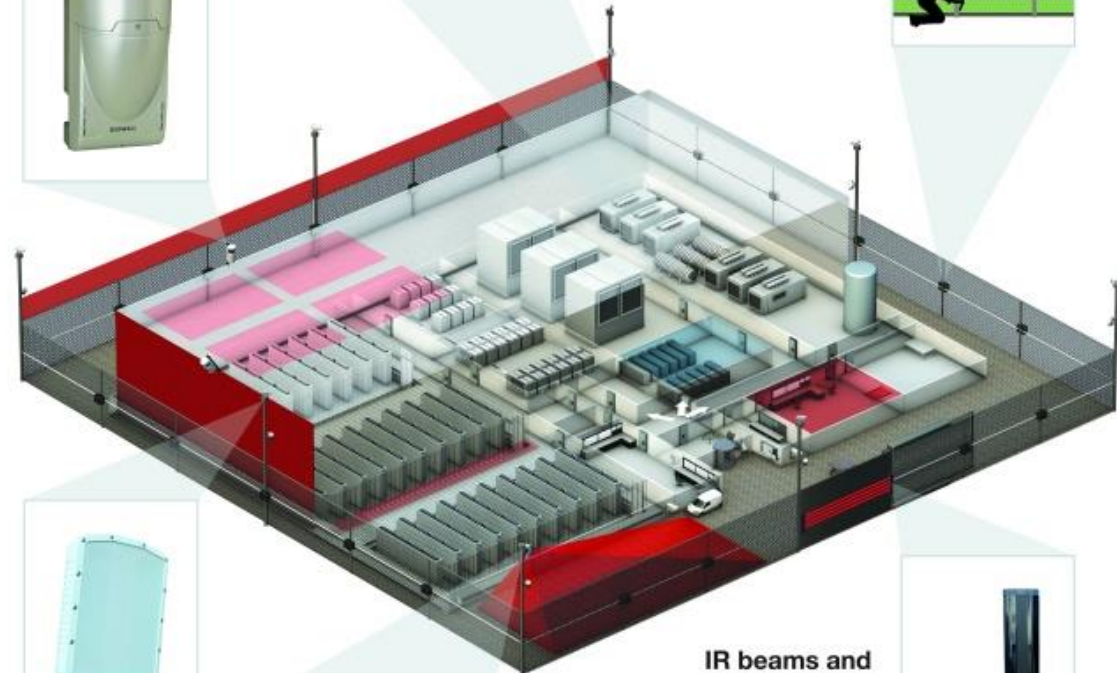

Radar sensors

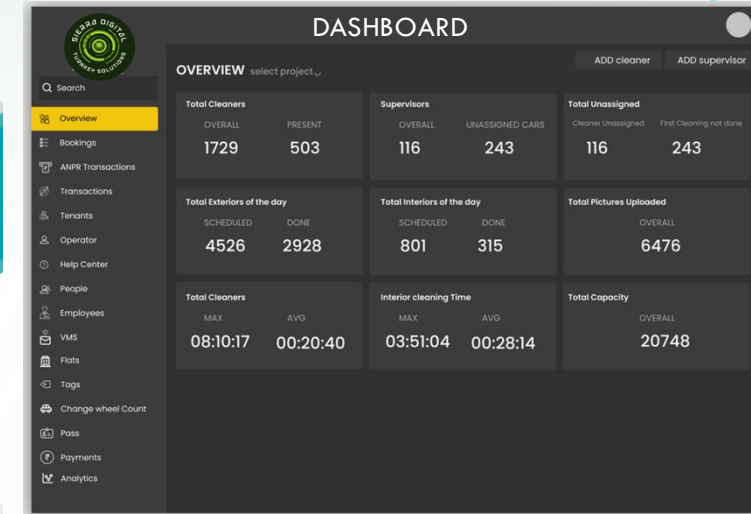

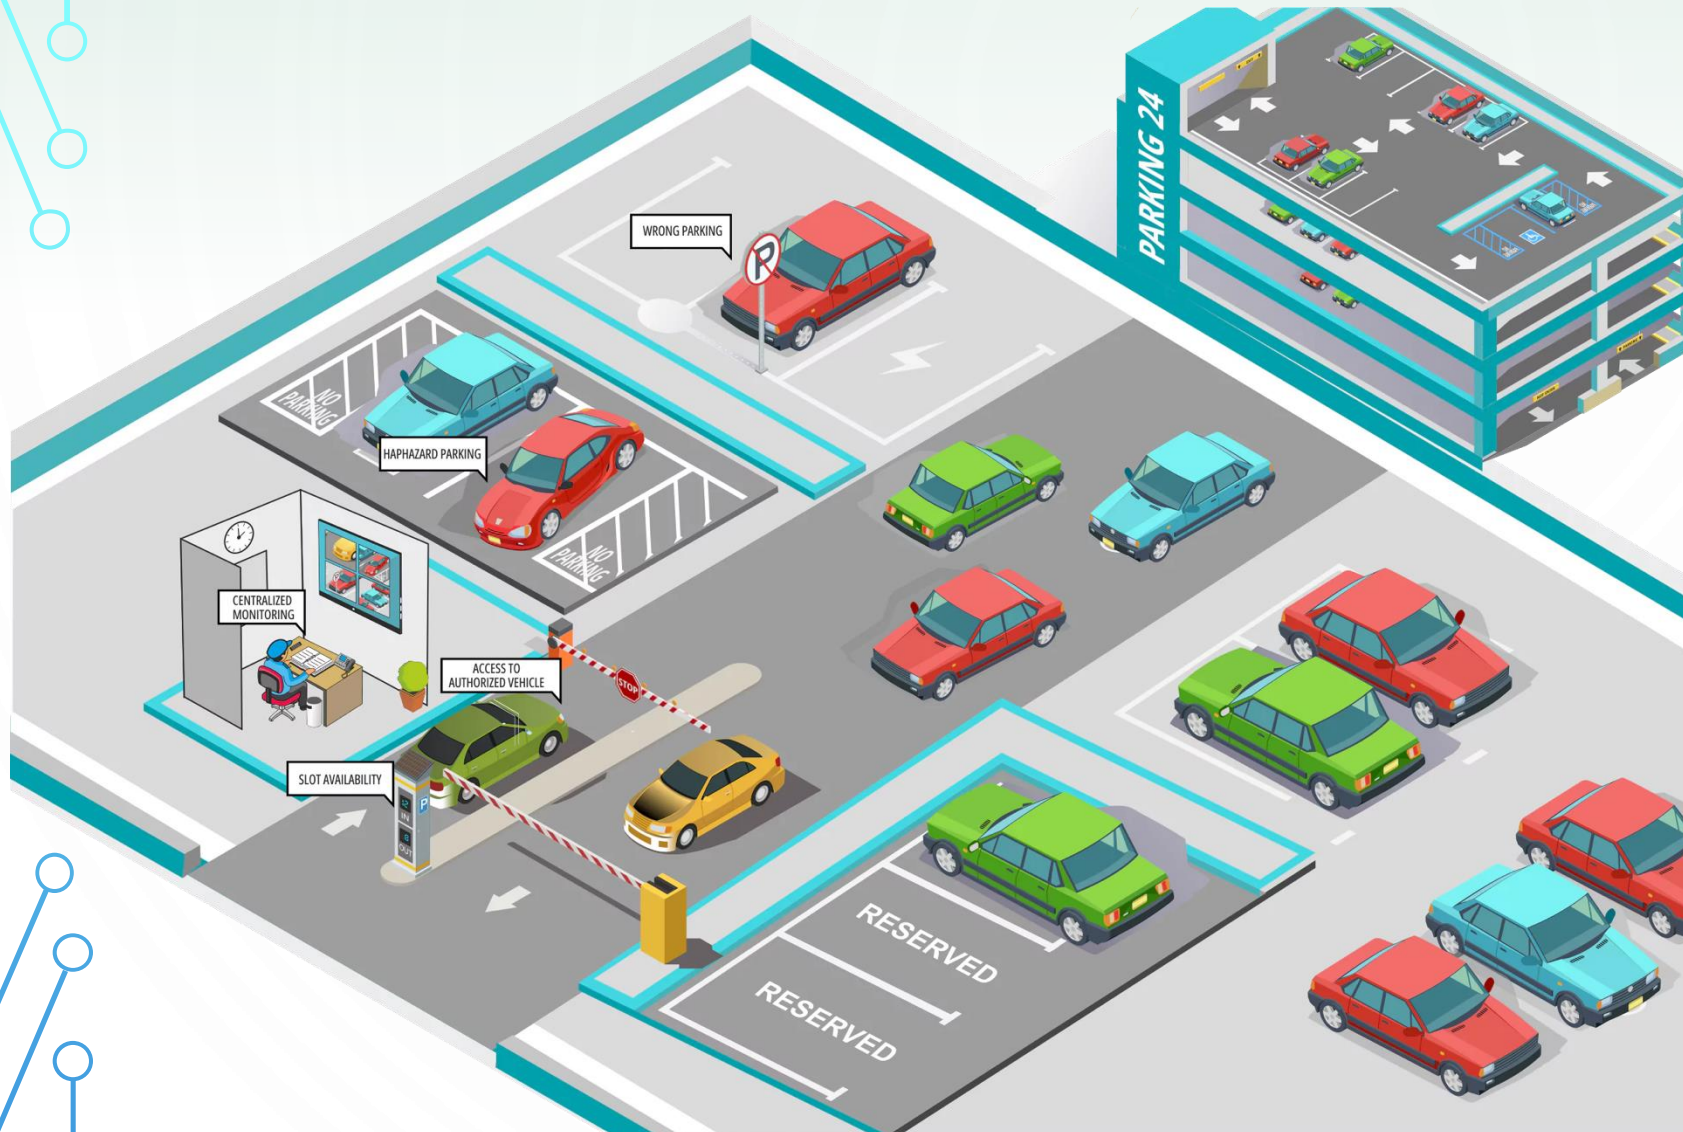

Outdoor long range PIRs

IR beams and beam towers

PARKING MANAGEMENT SYSTEMS

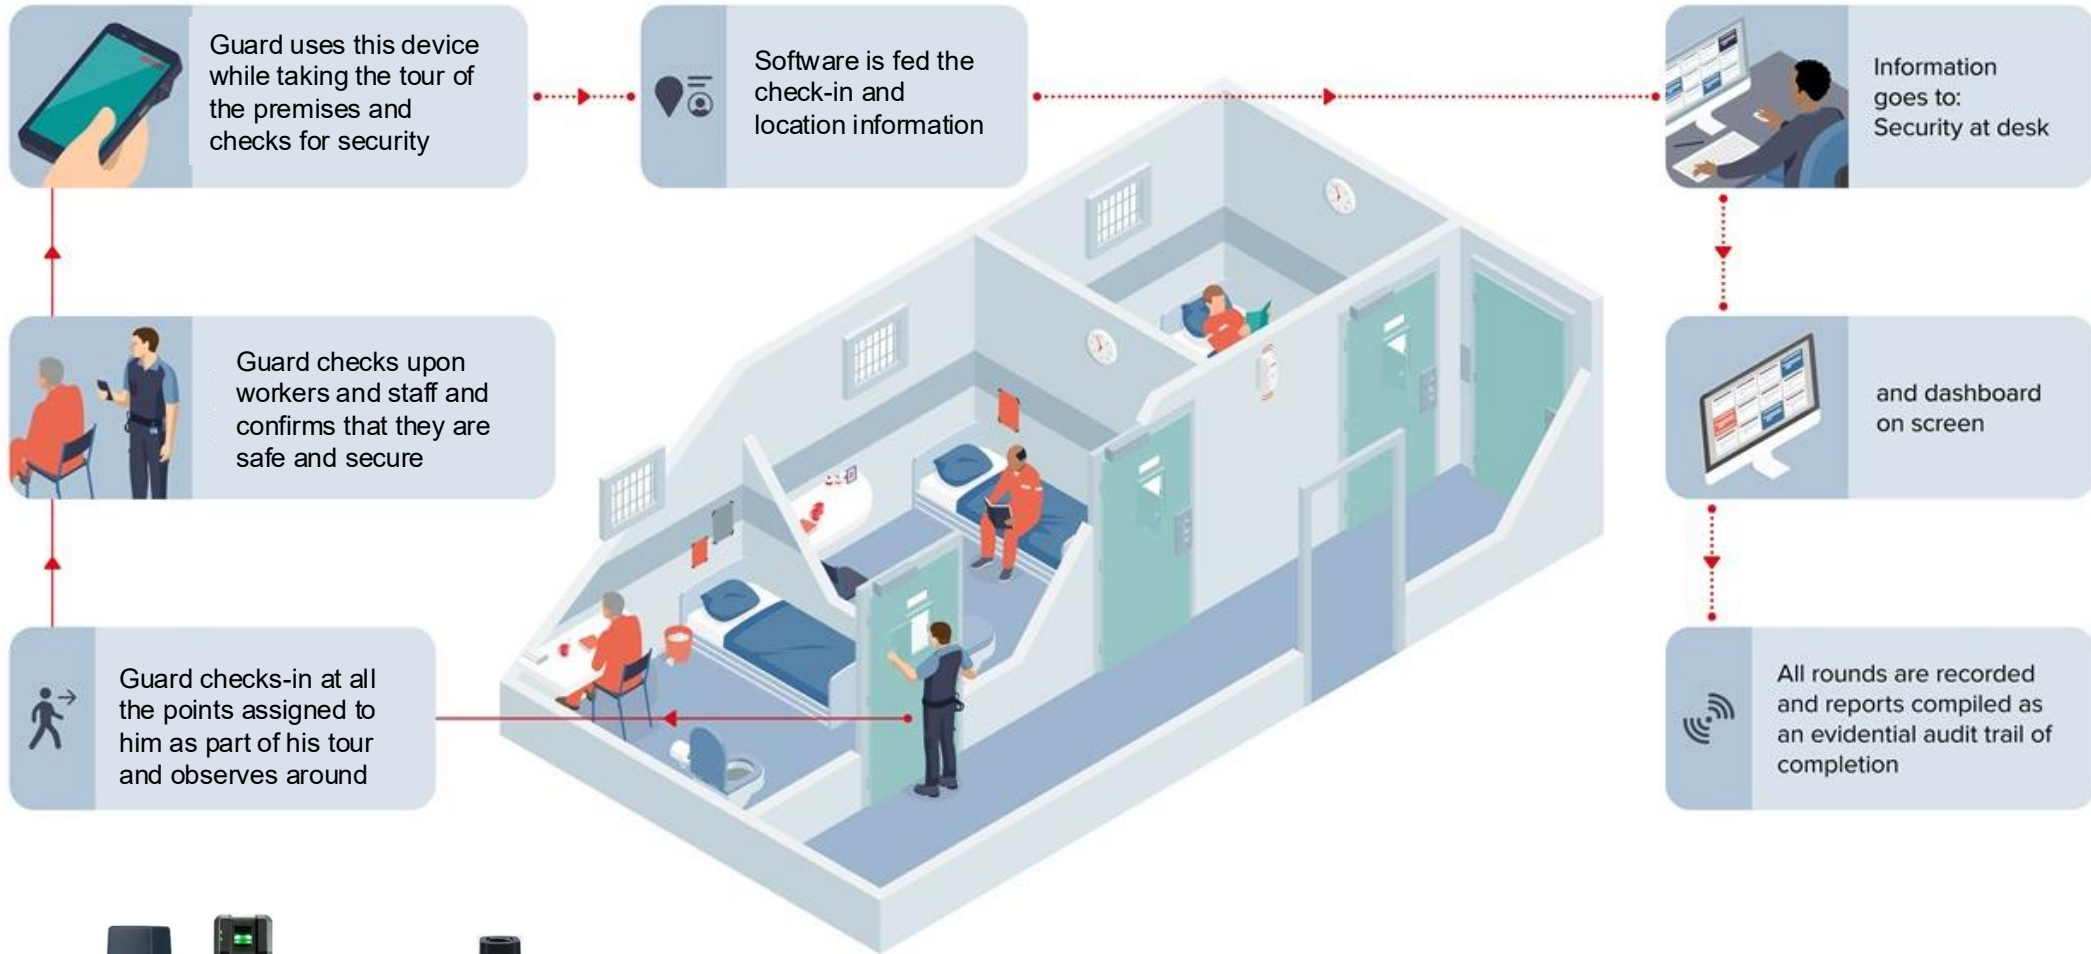

A Web/Window-based tech, which is customized as per your requirement consist of -

- Fastag-based long range RFID with banking integration
- Revenue generation & Non-revenue generation
- Payment Gateway integration
- Automatic ticket reader including Barcode/QR Code
- Integration with ANPR & DIC
- Customized report generation

GUARD TOUR MONITORING SYSTEMS

NETWORKING EQUIPMENT

REPEATER

A repeater is a two-port network device that regenerates the signal over a network before it becomes weak or gets damaged.

BRIDGE

A bridge is a device that joins any two networks or host segments together.

MODEM

Modems are devices that transform digital signals into the form of analog signals that are of various frequencies

ACCESS POINT

An AP or Access Point is a wireless appliance that operates on the OSI model's second layer. It can be used in two ways.

NETWORK HUB

A network hub is a multiport repeater that connects multiple wires from different branches.

NETWORK SWITCH

Switches play a more important role than hubs. A switch is a multi-port device that enhances network efficiency.

GATEWAY

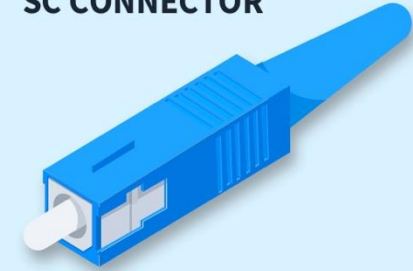

As the name suggests, the gateway is a passage that interlinks two networks together.

ST CONNECTOR

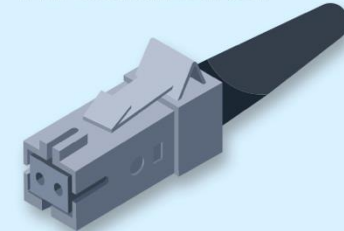

SC CONNECTOR

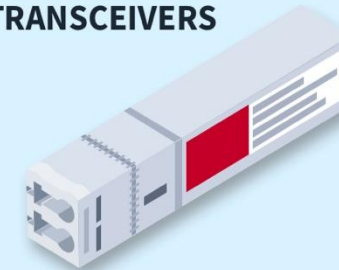

LC CONNECTOR

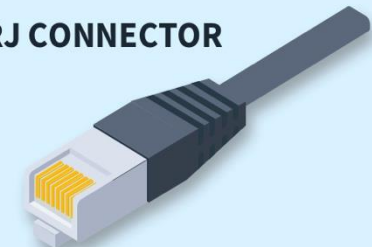

MT CONNECTOR
